

broadband SERVICES

The way that companies access the internet and global connections has a huge impact on the way they work. While few can dispute the benefits of employing eBusiness solutions, a significant restriction is being able to access a high-speed, reliable network.

MCSP can overcome these barriers by offering businesses faster ways of working with constant and instant internet access, fixed costs and increased efficiency with a unique broadband solution.

take a new approach...

Broadband is a fast connection to the internet that's always on. With this permanent connection you will have instant access to the web and email, increasing your staff efficiency and productivity due to communication speed. Time is no longer wasted waiting for data access or dial-up to occur.

Our broadband network uses a cable different to a conventional telephone network, allowing vast amounts of data to be sent and retrieved. You can choose from adding a simple adaptor to your phone socket and purchasing a modem, or MCSP will supply a tailored package to suit your requirements and install everything for you.

speed
things
up

With speeds up to 40 times faster than a standard dial-up connection, MCSP broadband services will help open up potential new areas of work.

A single ADSL broadband connection can provide internet access to your entire company, saving expenditure on both connectivity and time. Up to 250 users can be supported on a single line, with no special configuration needed for an end users workstation.

Our network is dedicated to businesses wanting the highest quality broadband service available. MCSP provide a personalised service, focusing on 100% customer satisfaction as our performance is critical when obtaining support for your connection.

Broadband offers the speed, reliability and high performance across your network, whilst MCSP provide the security and value for money your business demands.
