

# DATA CENTRE SERVICES

For many organisations it would not be cost effective to build and manage their own IT facilities. Where these systems are business critical, should they fail, the company's business would be brought to a halt.

Secure and reliable data networks are fundamental to the success of the modern enterprise. Working together we are able to lower costs and simplify interactivity with your business.

## take a new approach...

MCSP can offer you the benefits of a fully secure IT environment. By taking advantage of our unique purpose built Data Centre Services we can offer 24 hour security and technical support as well as state of the art protection from power cuts, fire and flood.

As well as physical security, these environments are protected by the latest in firewall and other electronic security techniques to prevent data loss through virus attack and intrusion by unauthorised external sources.

# protect your assets

Our dedicated system administrators constantly check your server manually, as opposed to using unreliable software like many other IT providers, so we can administer and update your server whenever it needs it.

MCSP will constantly monitor your system to proactively prevent problems occurring before they affect you and unforeseen problems will be resolved quickly and efficiently. MCSP do not rely solely on shared servers, you have the option to purchase your own dedicated server for an even faster response time.

Each client is also offered the choice of a dedicated line, we will not share a single connection with more than one client, again offering speed benefits that surpass other providers. You can now choose the bandwidth to suit your requirements, from 2Mb/s to 34Mb/s we can cater for your current and future needs.

As a modern organisation, your network is a strategic resource for competing in a global marketplace. Investing in the security for your data structure allows you the freedom to concentrate on your core business without concern.
