

PORTABLE APPLIANCE TESTING SERVICES

Portable Appliance Testing is an important part of any health and safety policy. Over 25% of all reportable electrical accidents involve portable appliances. Faulty electrical appliances and leads are the main cause of accidental fires in commercial buildings, representing over a quarter of all such fires.

Can your organisation take that risk? Make sure your appliances are safe by making sure they are tested regularly.

take a new approach...

The National Association of Professional Inspectors and Testers define a portable appliance as 'any electrical item which can, or is intended, to be moved whilst connected to an electrical supply.'

Whatever size your business is, PAT testing will apply to you. Every employer should make suitable and sufficient assessment of the risks to the health and safety of his employees to which they are exposed whilst at work.

MCSPT can ensure you are complying to regulations and not putting others at risk, enabling you to focus on your business and protect your IT investment.

don't risk it

Any electrical testing should be performed by a person who is competent in the safe use of the test equipment and who knows how to interpret the test results obtained. MCSPT are capable of inspecting the equipment and, where necessary, dismantling it to check the cable connections.

Regulations suggest that 'regular inspection of equipment is an essential part of any preventative maintenance programme', and MCSPT can offer bespoke testing packages to suit your size of business.

MCSPT can provide an on-site quotation quickly and easily. By assessing the environment in which your equipment is installed, the type of users, the equipment construction and type, we can give a full PAT testing assessment and ensure not only your safety but your offices and others around you.

MCSPT can provide complete peace of mind for your organisation, by maintaining a safer working environment for all your staff.

unique features & benefits

- Fully competent and trained examiners in electrical testing, earth bond tests, insulation resistance tests and various optional tests
- Test record certificates provided, proving an organised system of testing for future claims
- Frequency of testing assessed by duty holder and service package to suit your requirements
- On-site, no obligation quotation service at your request
